CALCULUS 2014 BC #5 (no calculator) Let  $y$

$1 = xe^{x^2}$  and  $y^2 = -2x$  in the graph above. (a)

Area =  $\int_0^1 (y_1 - y_2) dx = \int_0^1 (e^{x^2} - \sqrt{-2x}) dx = \left[ \frac{1}{2} e^{x^2} - \frac{2}{3} (-2x)^{3/2} \right]_0^1 = \frac{1}{2} e + \frac{2}{3} = \frac{1}{2} e + \frac{2}{3}$

$\frac{1}{2} e + 1 - \left( \frac{1}{2} e + 1 \right) = \frac{1}{2} e + 1 - \frac{1}{2} e - 1 = 0$

Two possible solutions satisfy this equation,  $y = -32 - \sin(x)$  and  $y = +32 - \sin(x)$ , but only the first one of them satisfies the initial condition  $y(0) = 1$ . Therefore,  $f(x) = 32 - \sin(x)$ . 2 Notes: 1. The statement  $f(0) = 1.4$  is incorrect and could result in lost points. 2. The domain of this solution is all real numbers.

bring together mathematicians from various countries in order to promote cooperation in the field, with a particular focus on applications. The book includes studies on boundary value problems; Markov models; time scales; non-linear difference equations; multi-scale modeling; and myriad applications.

International Conference on Large-Scale Scientific Computations, LSSC 2013, held in Sozopol, Bulgaria, in June 2013. The 74 revised full papers presented together with 5 plenary and invited papers were carefully reviewed and selected from numerous submissions. The papers are organized in topical sections on numerical modeling of fluids and structures; control and uncertain systems; Monte Carlo methods: theory, applications and distributed computing; theoretical and algorithmic advances in transport problems; applications of metaheuristics to large-scale problems;

Often management is the art of making strategic and tactical decisions with a total lack of objective information. How often do we wish for a crystal ball that would let us see how decisions today will play out in the future? Unfortunately it is not yet possible to predict the future, but it is possible to generate objective criteria to help make today's decisions. While simulation has been around for decades, recent advances have made it much more accessible and useful in our daily world. The software is now less expensive and easier to learn and use. And

the flexibility and accuracy have dramatically improved. But most important, modern tools allow you to solve problems much faster than ever before - making those solutions timelier and less costly, and letting you reap the benefits quickly. We invite you to learn about simulation and its potential to improve your business. Then perhaps use this book as a companion to the free software download to start building models on your first day. After completing this introduction, you can continue your learning by taking advantage of the free video training available on the Simio web

This book covers applications of fractional calculus used for medical and health science. It offers a collection of research articles built into chapters on classical and modern dynamical systems formulated by fractional differential equations describing human diseases and how to control them. The mathematical results included in the book will be helpful to mathematicians and doctors by enabling them to explain real-life problems accurately. The book will also offer

case studies of real-life situations with an emphasis on describing the mathematical results and showing how to apply the results to medical and health science, and at the same time highlighting modeling strategies. The book will be useful to graduate level students, educators and researchers interested in mathematics and medical science.

fractional operators, fractional variable order operators, and uncertain derivatives to groundwater flow and environmental remediation. It presents a formal set of mathematical equations for the description of groundwater flow and pollution problems using the concept of non-integer order derivative. Both advantages and disadvantages of models with fractional operators are discussed. Based on the author's analyses, the book proposes new techniques for groundwater remediation, including guidelines on how chemical companies can be positioned in any city to avoid groundwater pollution.
